NOTE : ye yha ka transform map to automatically aajayega jaise hi record ko save kroge. Kyuki ye transform map iss import set table ka tha.

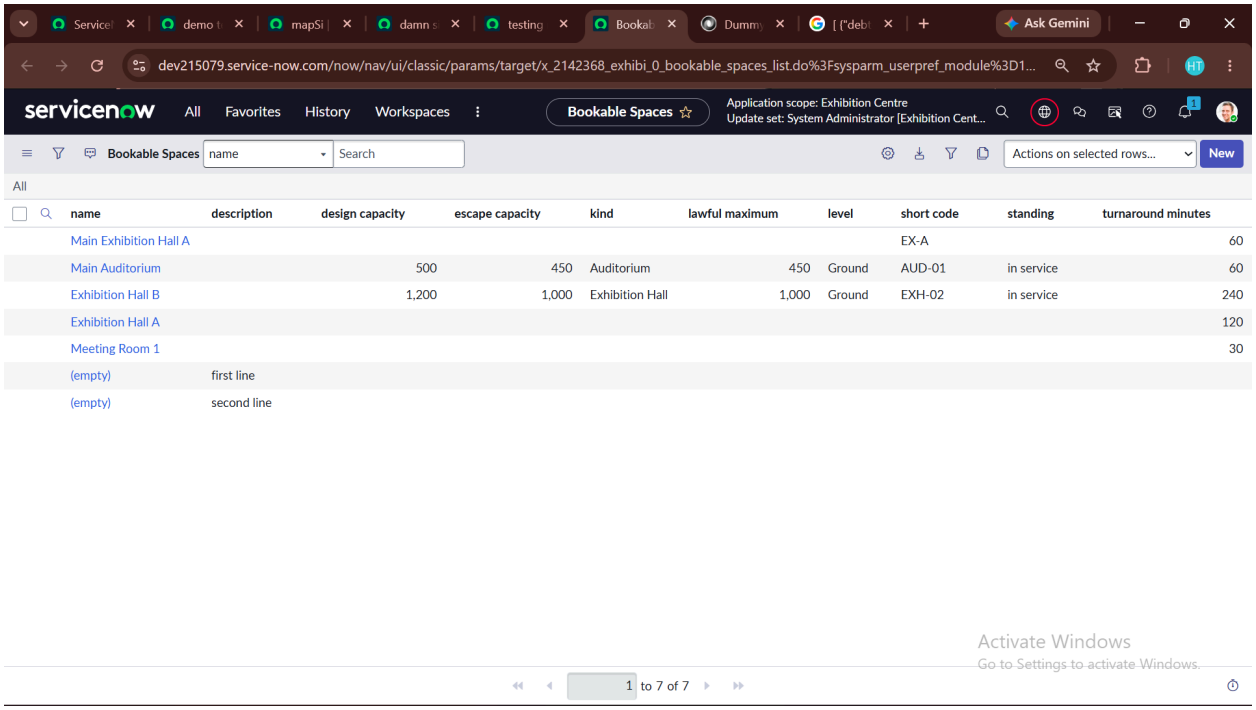

Then request action bnalo:

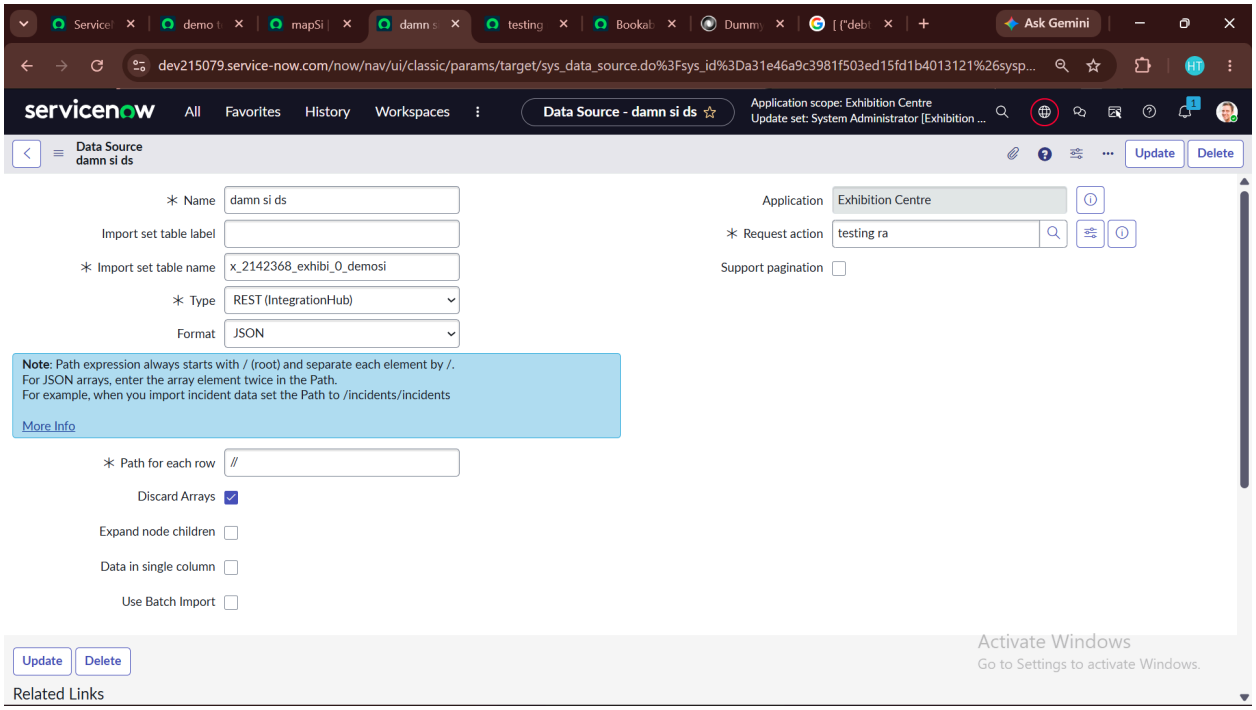

Then schedule import pe jaake iss data source ko select karlena and then jaise hi execute now ko click kroge to ye data aajayega table me :

****

Question : My doubt is : ki yha jo ye import set table maang rha hai. Iska matlab kya mujhe phle ek import set table bnani hogi ? means ye to load data se bnegi but load data ke liye mujhe to xlsx file chahiye hogi jo mujhe import karani hai. But request action to mai kar hi issiliye rha hu ki mujhe manually load naa karna pde data. Just api hit kru and vo load hojaye. Agar manually hi karna tha load data to fir ye request action ka use hi kya rh jayega? To mujhe ye doubt hai .

Answer :
Aapka doubt bilkul sahi hai, par **Import Set Table manual excel file load karne ke liye zaroori nahi hoti**.

Aapka Doubt Clear:

1. **Table Manual Nahi Banani Padt:i** ServiceNow mein Import Set Table banane ke liye Excel load karna zaroori nahi hai. Jab aap Data Source create karte hain, toh bas **"Import set table label"** ya **"Import set table name"** field mein koi naya naam type kar dete hain (jaise aapne u_demo_si ya x_..._demosi daala hai).
2.
3. **ServiceNow Auto-Create Karta Hai:** Jab aap pehli baar **Request Action** se API hit karte hain (ya "Test Load 20 Records" par click karte hain), ServiceNow API response ke JSON structure ko read karke us Import Set Table ko **automatically backend mein create aur schema auto-populate** kar deta hai.
4.
5. **Request Action Ka Main Purpose: Request Action** ka kaam wahi hai jo aap chahte hain — **Bina kisi manual Excel file ke, seedhe API hit karke automatic data pull aur staging table mein load karna**.
6.

Key Takeaway

Aapko koi Excel load karke pehle se table nahi banani. Bas Data Source form par ek naya **Table Name** likhein, Request Action select karein aur run karein — ServiceNow API se dynamic data laakar apne aap table aur columns structure bana dega.

Ye shi kah rha hai :

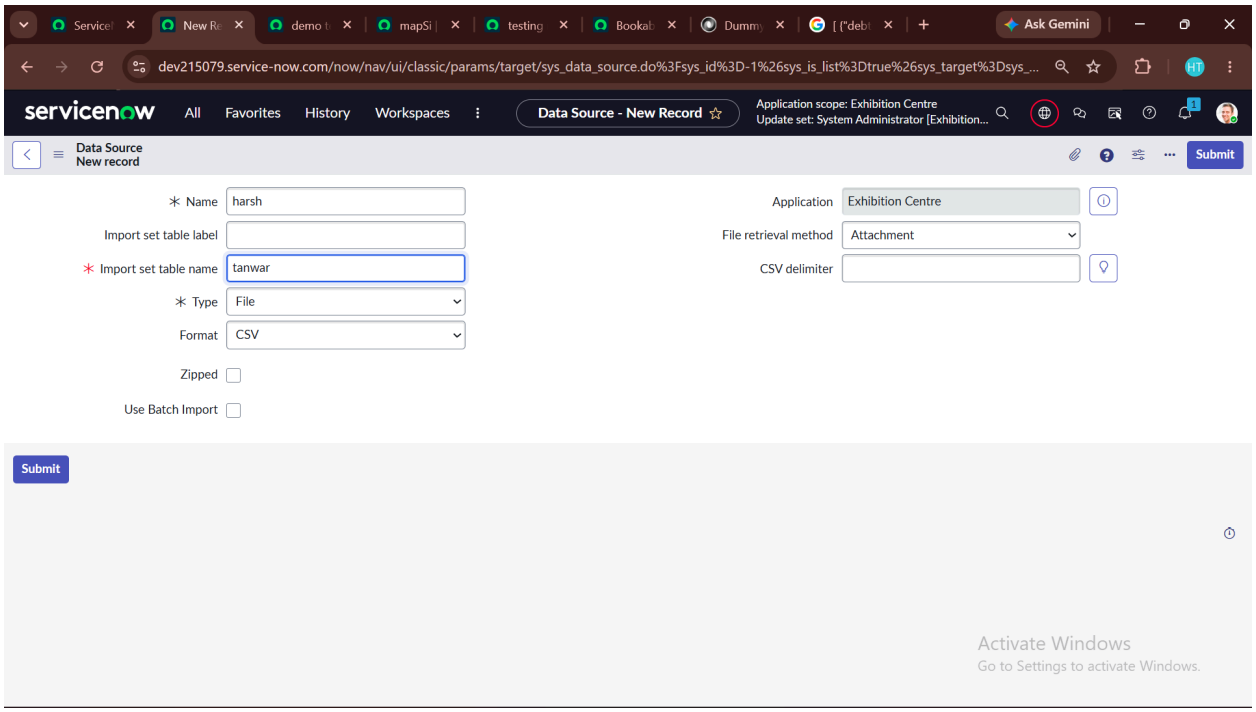

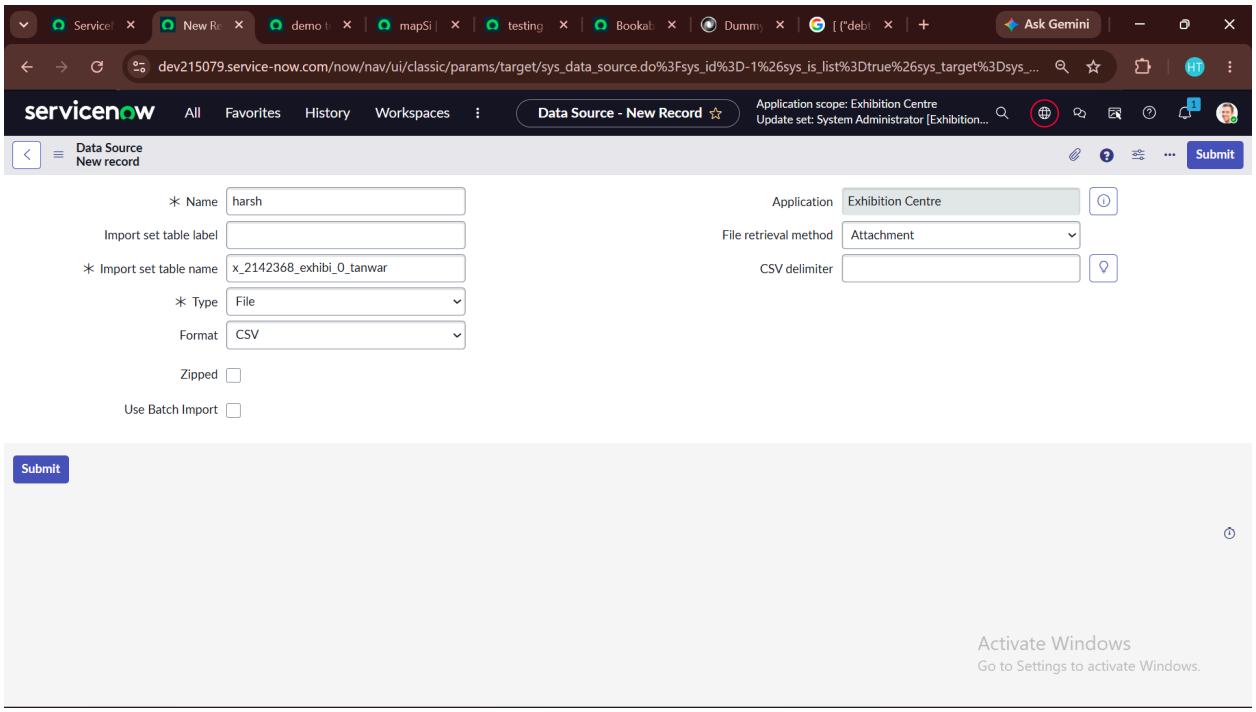

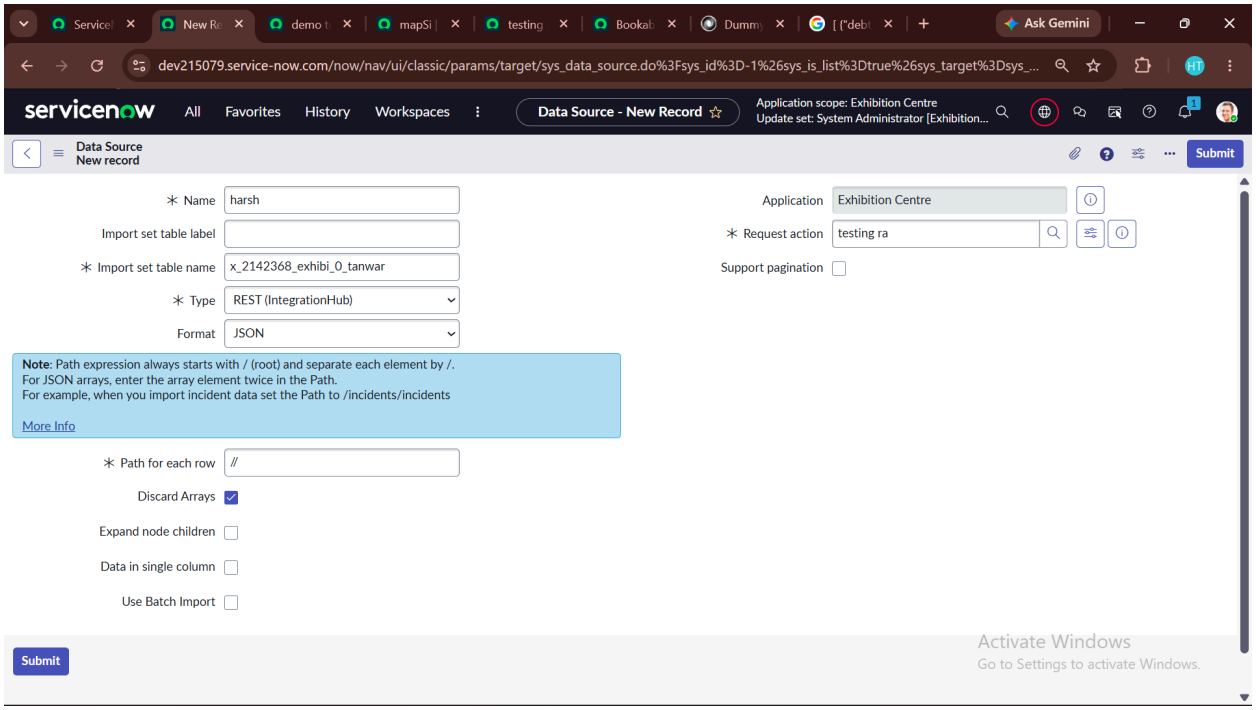

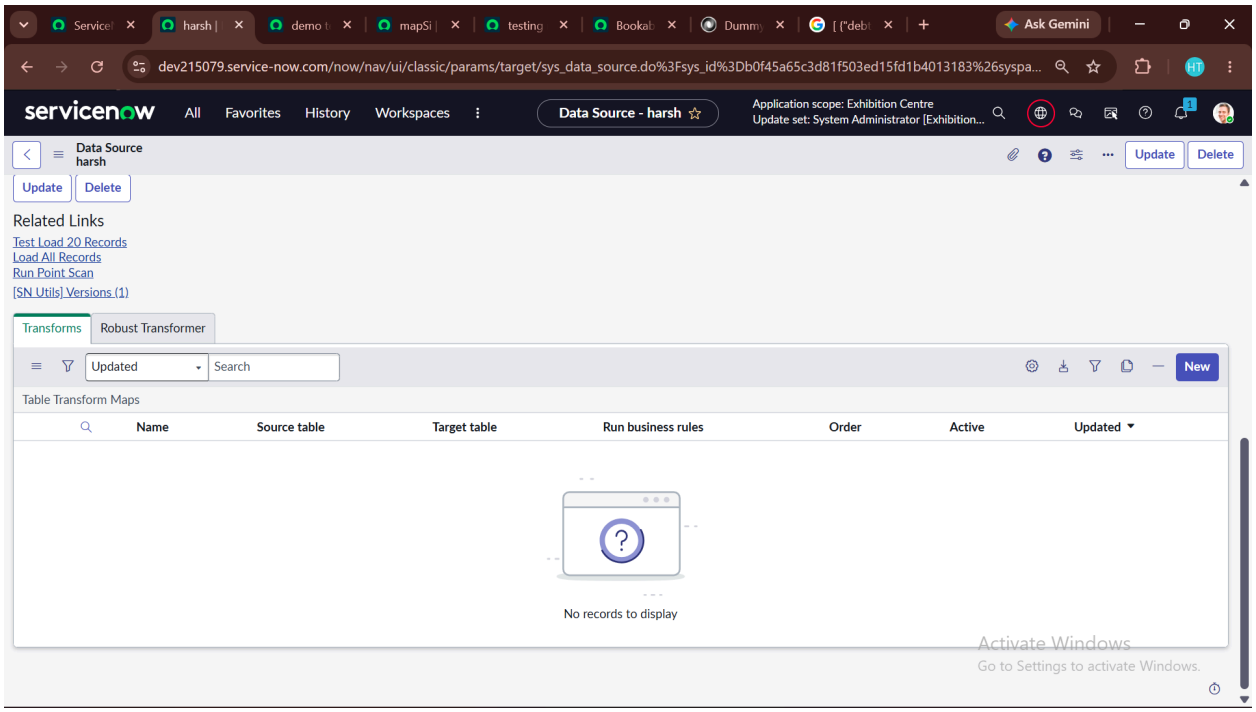

Abb jaise hi outside cursor click kroge to :

ye automatically ek import set bnadega.

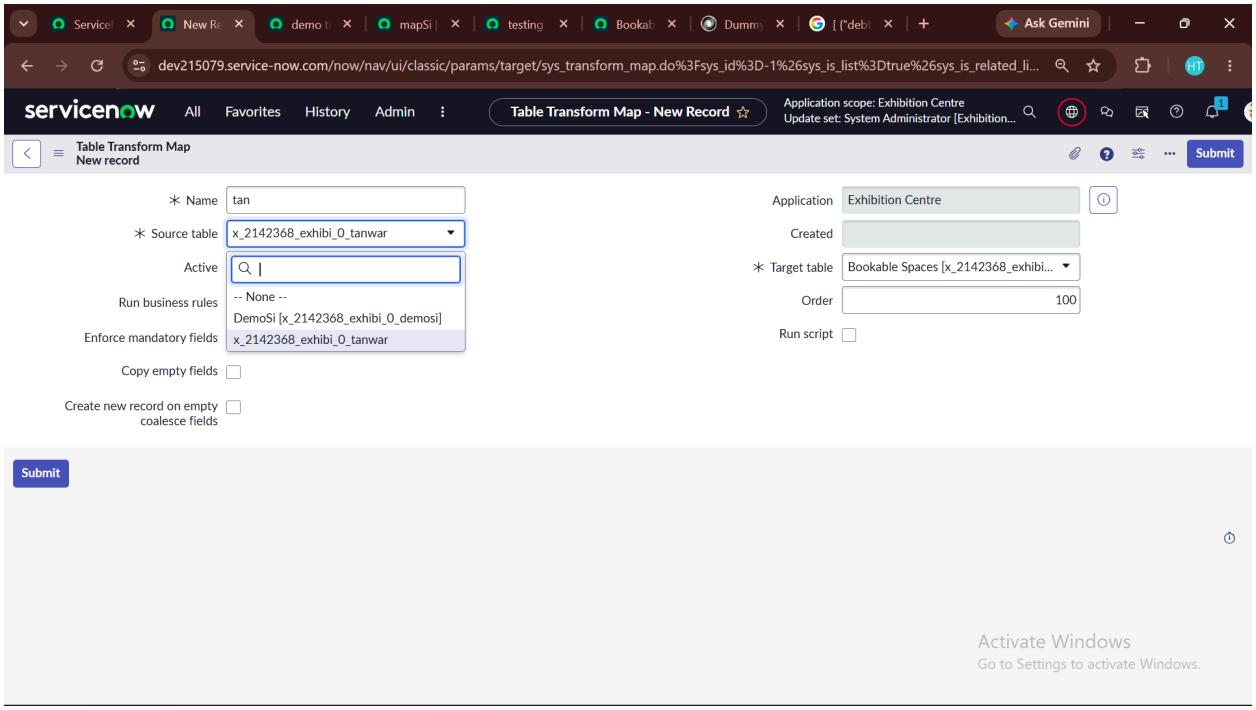

Abb ye karke submit kro :

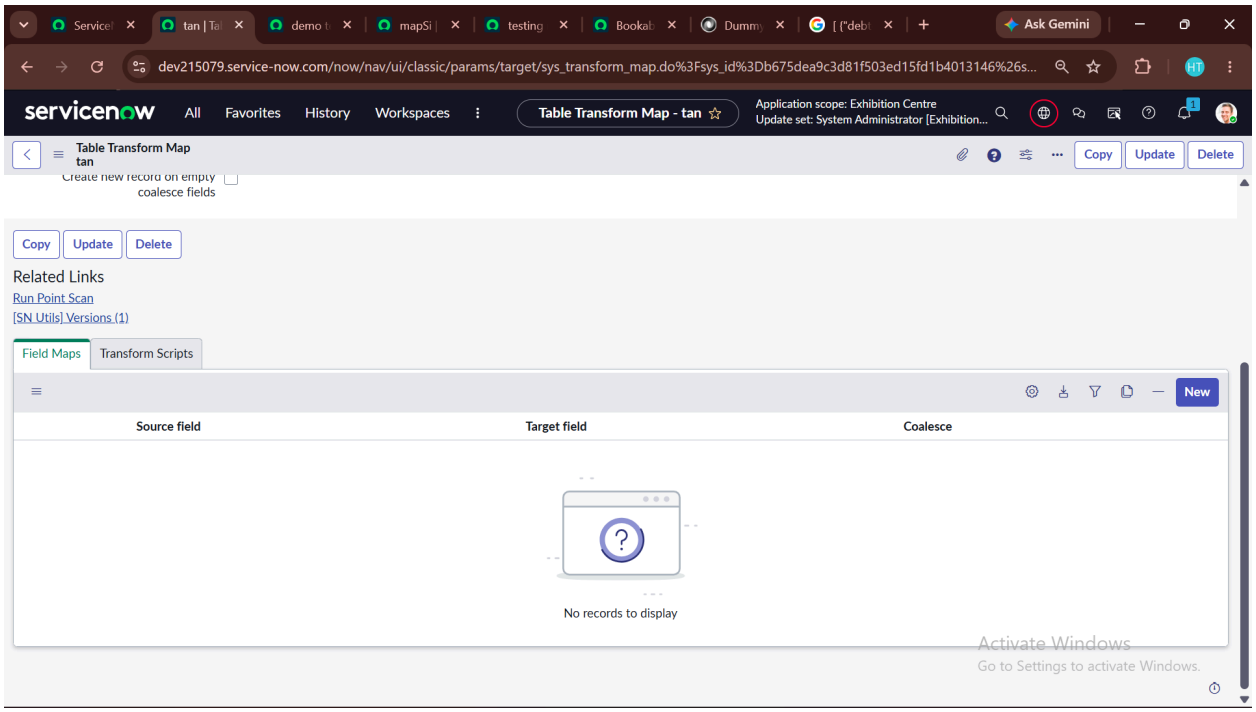

Abhi tumko iska transform map create krna hoga.

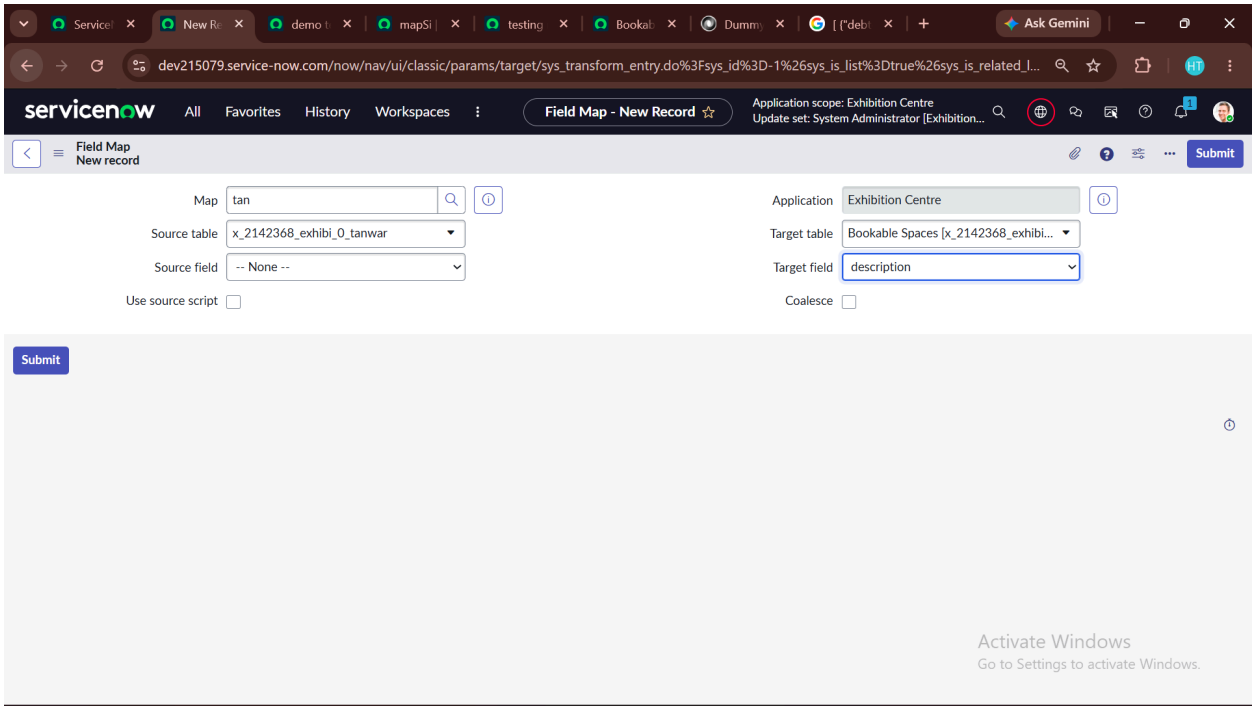

Jaise hi transorm map ke liye new click kroge to ye dekho yha ve saare import set table dikha rha hai jo iss scope ke liye bne the :

Tumhe ye fields khud create krke map krni hogi kyuki ye import set abhi empty hai, kyuki isme koi data hai hi nhi abhi. Because abhi tumne rest api pe hit krke data nhi fetch kiya hai.

Lekin ek orr problem aagyi :
Question : Abhi iss source fields me koi field hai hi nhi, kyuki abhi tab koi data load hi nhi hua to abb kya kroge? Field transform Script likhoge ya kya kroge ?

Answer :
Aapka ye confusion bilkul natural hai, lekin yahan script likhne ki koi zaroorat nahi hai.

Aapko Source Field Kyun Nahi Dikh Rhi?

Import Set Table (`x_2142368_exhibi_0_tanwar`) dynamic hoti hai. Jab tak usme API se kam se kam ek baar real data response nahi aayega, tab tak ServiceNow ko pata nahi chalega ki JSON me `debtor_name` ya koi aur field aa rahi hai. Isliye abhi **Source field drop-down mein** `-- None --` **aa raha hai**.

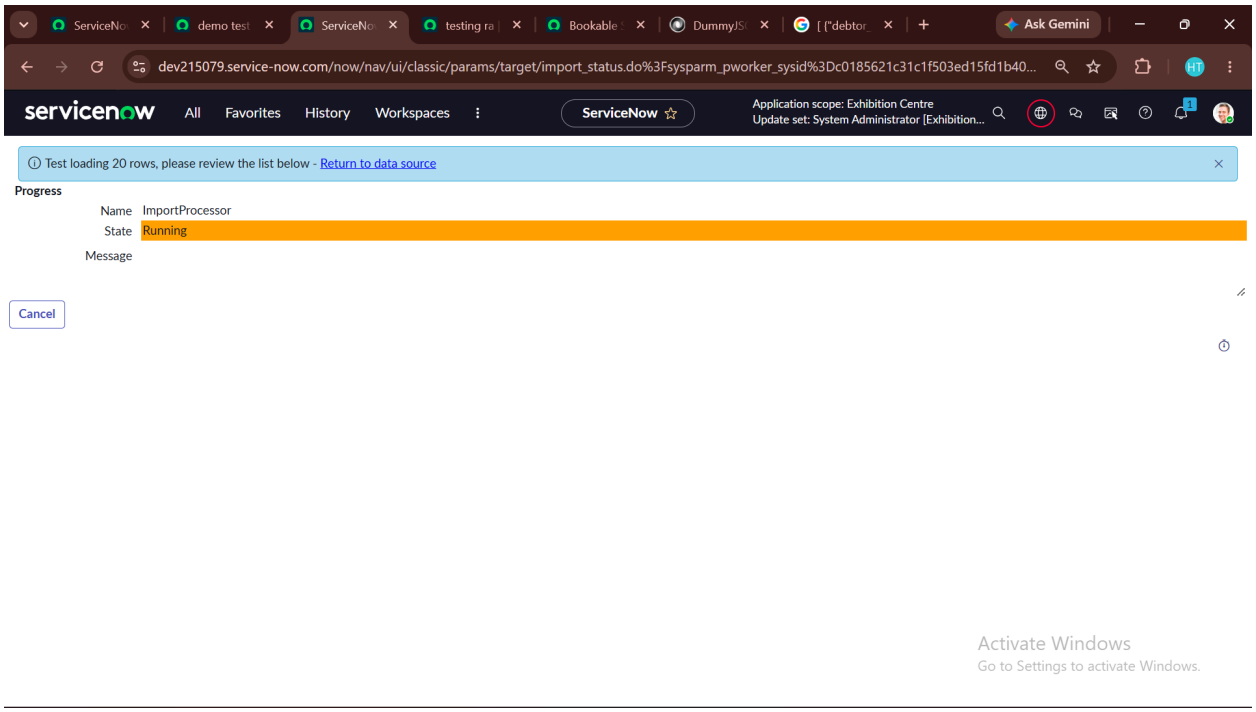

Iska Simple Solution (2 Steps)

1.Pehle Data Load (Test Load) Karein: Data Load Step.
Apne Data Source record (harsh) par wapas jayein. Related Links me **"Test Load 20 Records"** par click karein. *Verification:* API hit hogi aur JSON keys ke according import set table mein automatically columns (fields) create ho jayenge.

2.Field Mapping Auto-Generate Karein: Mapping Step.
Data load hone ke baad apne Transform Map (tan) par wapas aayein. Ab Related Links me **"Auto Map Matching Fields"** ya **"Mapping Assist"** par click karein. *Verification:* Source Field dropdown mein API wali saari fields dikhne lagengi aur mapping aasaani se ho jayegi.

Summary: Aapko koi custom Field Transform Script nahi likhni hai. Bas pehle **Test Load 20 Records** par click karke table ke fields populate hone dijiye.

To maine data source vale form pe jaake, related links me jo load 20 data tha usps click kiya :

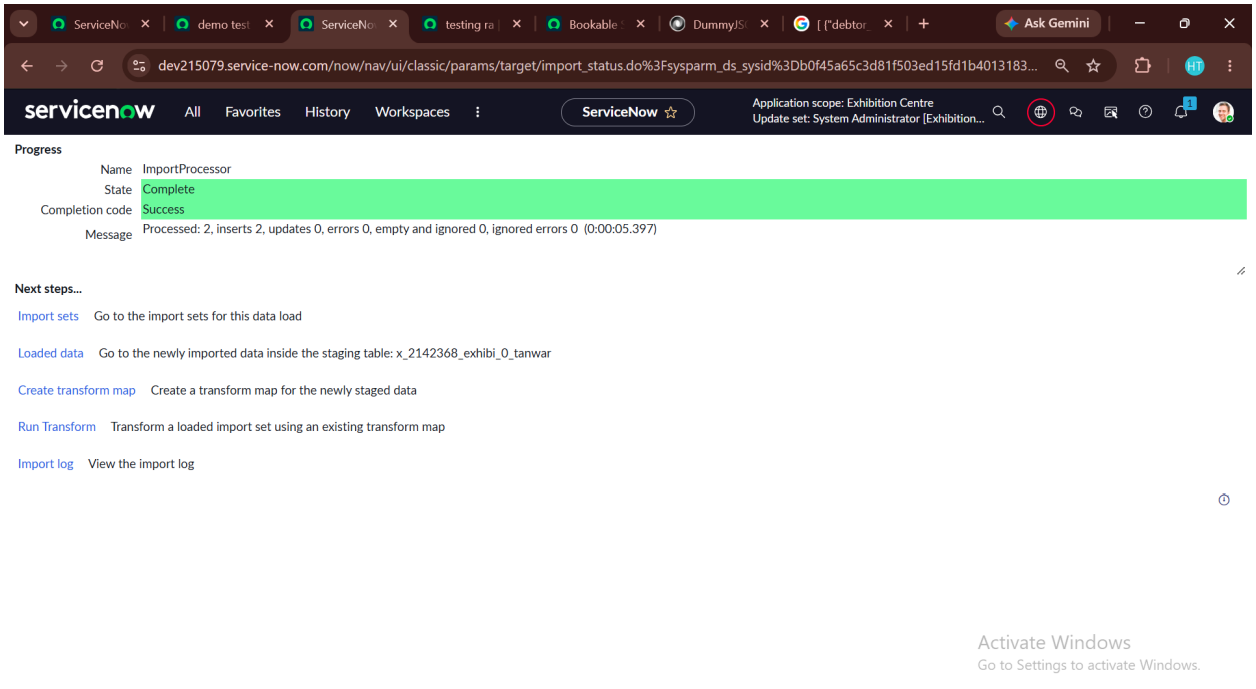

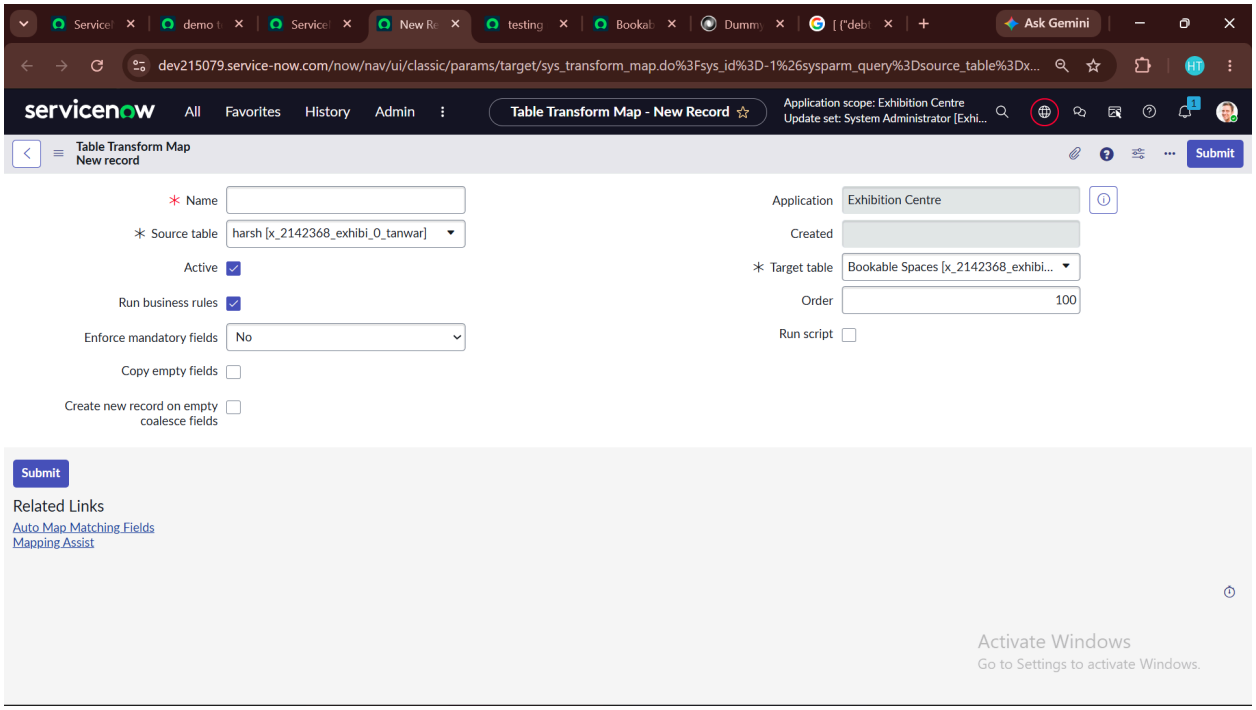

Abb mai create transform map kar skta hu.
Jab maine yha pe create transform map click kiya to :

ye aagya .

Yani abb ye source table me jo hai harsh naam se ek import set aachuka hai.

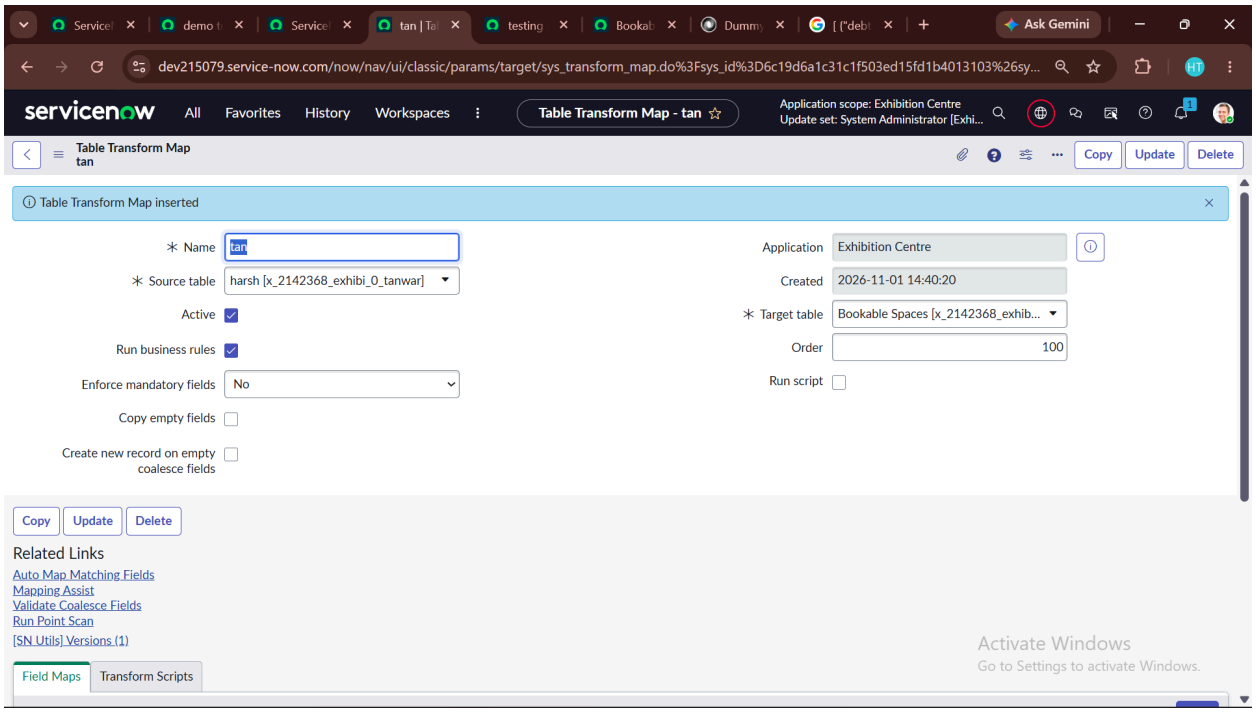

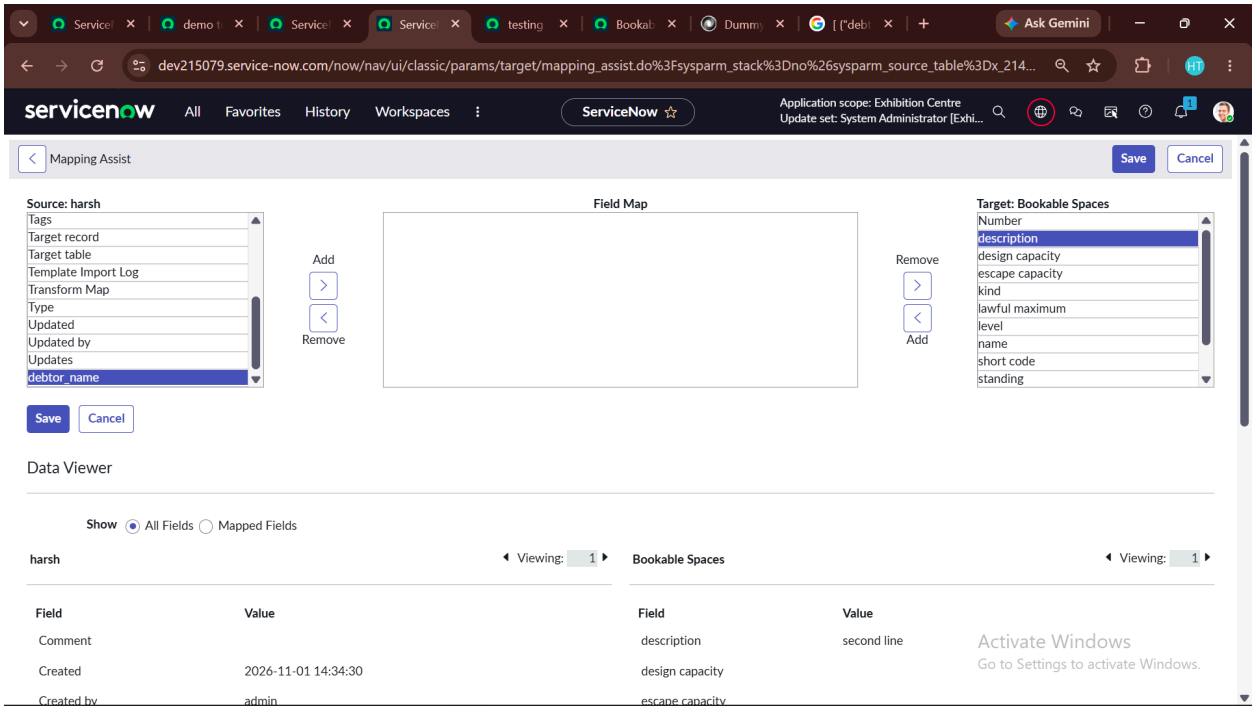

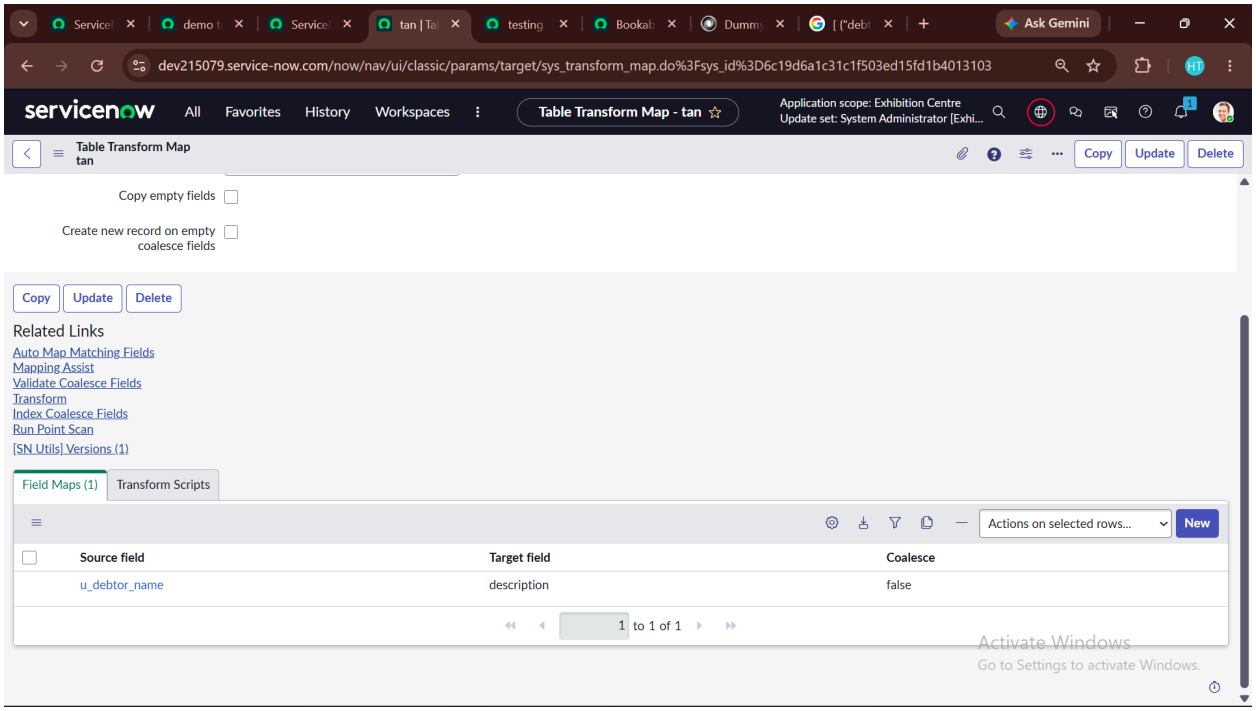

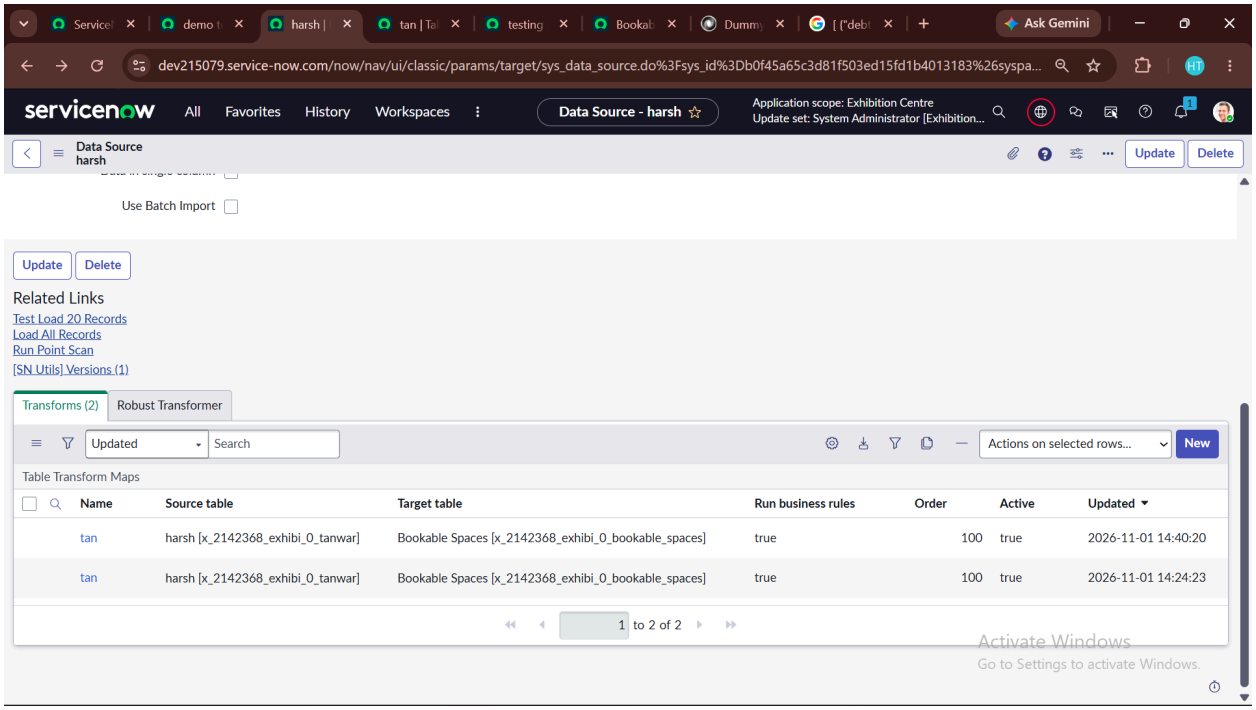

Abb mapping assist krlo

Ye rha debtor , jo maine dummy json se bnanaya tha.

ye mai vapas aagya yha. (khud se, not by snow)

To maine old vala delete kardiya, varna 2 baar data load hojata :

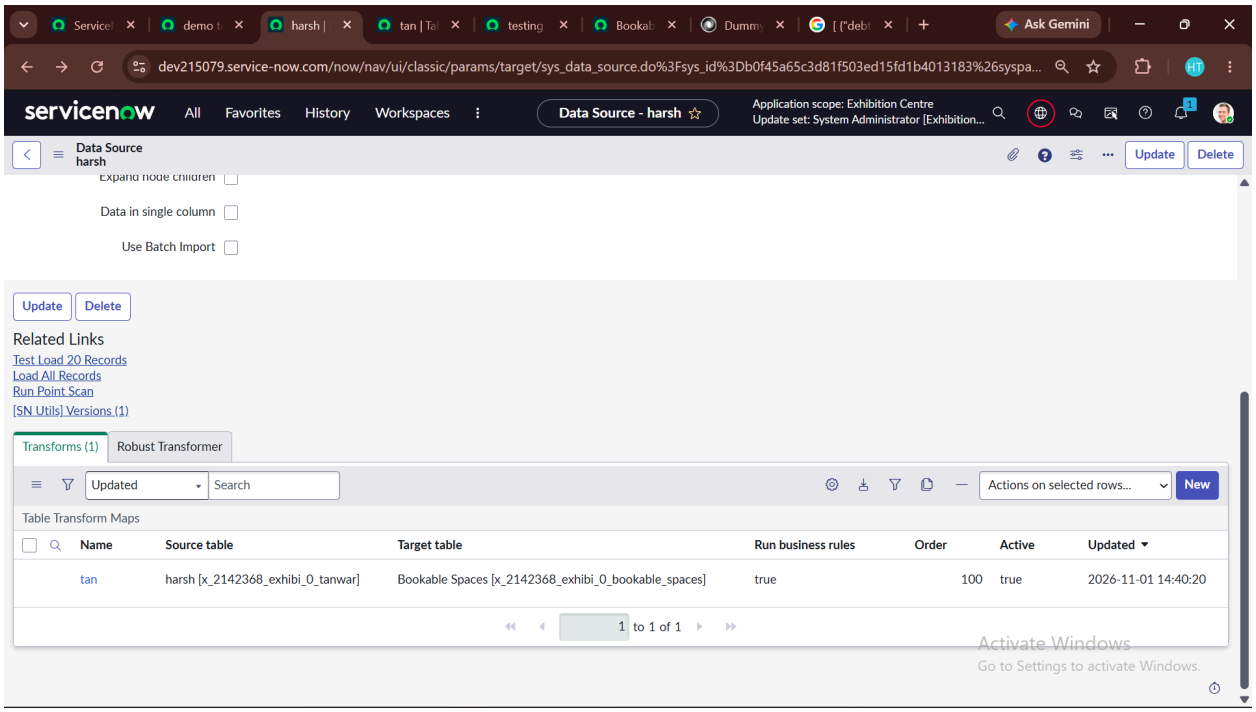

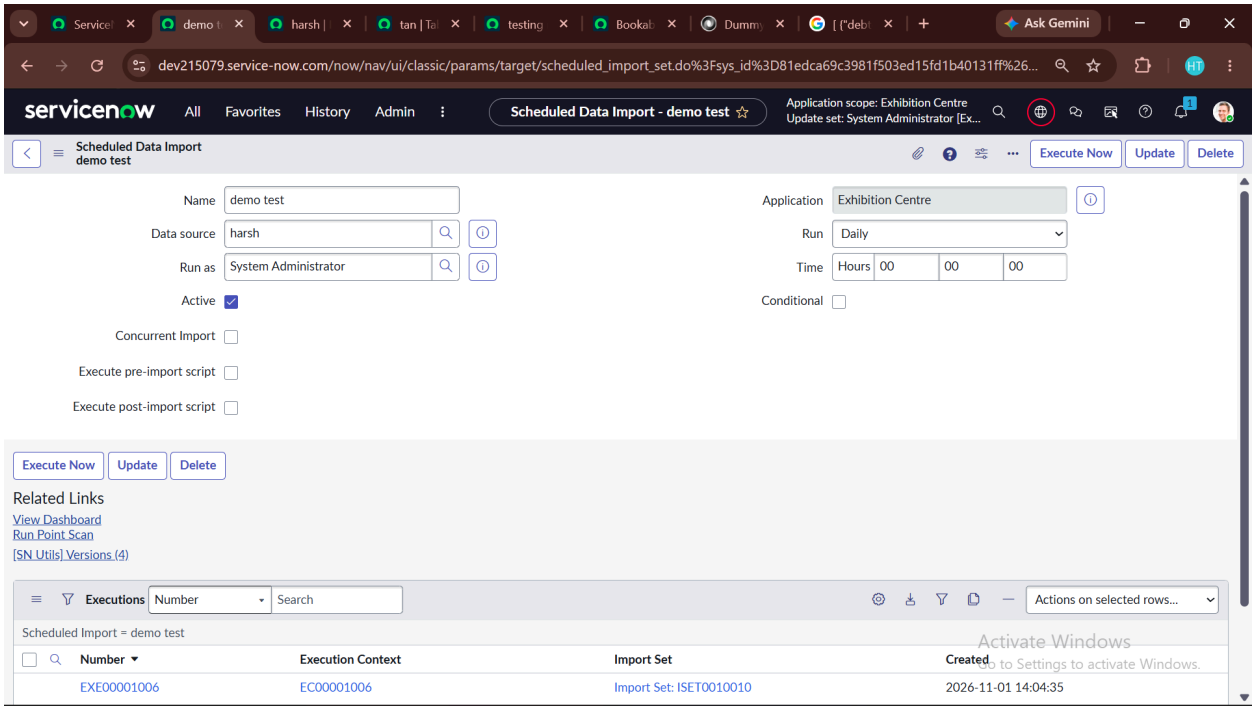

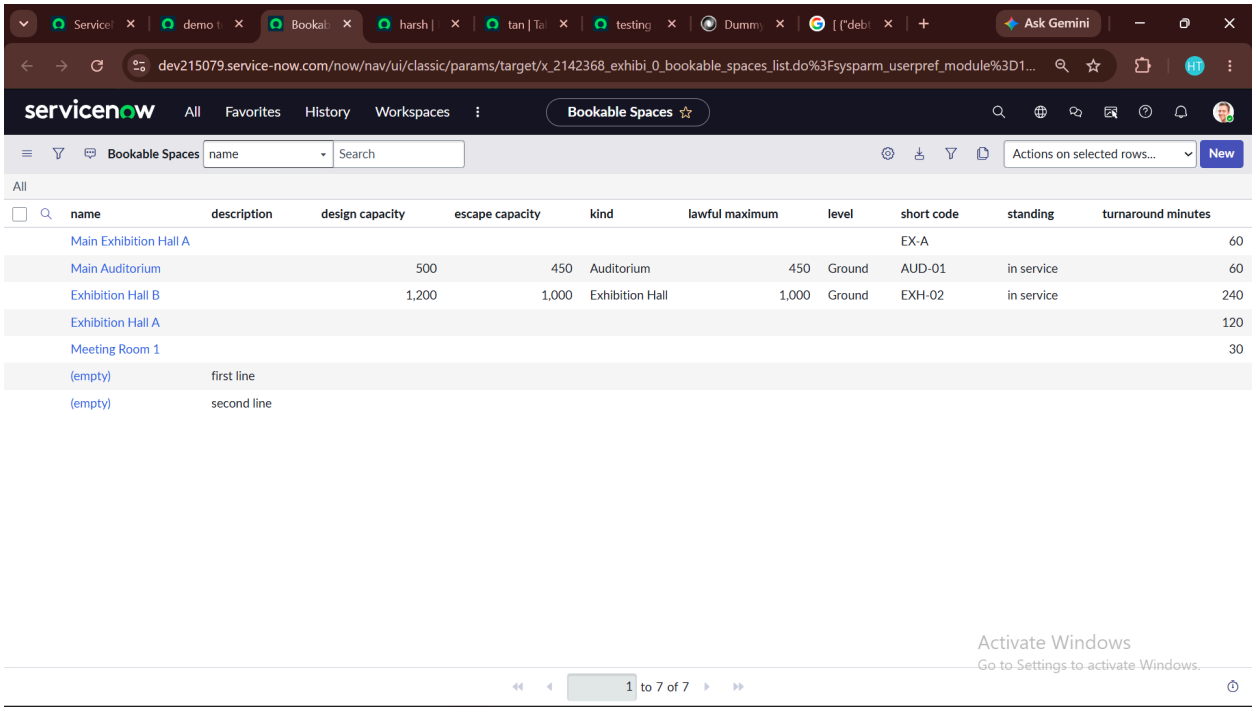

Abb mai schedule import pe vapas jaake iss harsh data source ko select krta hu :

Then test krne ke liye execute now par click krta hu :

And eureka!!! Data mill gya…. Successfully.
